NEWS RELEASE

CamSemi appoints Gary Pinelli as board director

CamSemi has today announced a further strengthening of its board with the appointment of Gary Pinelli, a seasoned power management expert with over 35 years' experience in the semiconductor industry.

Mr Pinelli has previously held senior roles with Harris, Intel and Mostek and in the last ten years has led the sales and marketing activity at two power management companies: Volterra, which is now a highly successful public company, trading on NASDAQ and the market leader in DC/DC power management applications; and then iWatt, a private company addressing the AC/DC sector. Prior to these two roles, he co-founded TelCom Semiconductor, a publicly traded company acquired by Microchip.

"CamSemi is very fortunate to have someone with such directly relevant business experience join our board. Gary's track record in the semiconductor industry and knowledge of the power management space will greatly enhance the skill set on our board and be invaluable as we continue to build CamSemi's market position and portfolio of breakthrough energy-efficient power conversion products," said David Baillie, CamSemi CEO.

In addition to his new role at CamSemi, Gary is also on the board of Aras Power Technologies, a power module company and Manresa, a two star Michelin restaurant in Los Gatos, California. He holds a BSEE degree from Bradley University, Illinois and outside of work is actively involved in tennis, cycling and bowling.

Notes for editors

About CamSemi

CamSemi is the emerging leader in power management ICs for optimised energy-efficient off-line power conversion. The company's unique solutions and approach can help manufacturers of mains-powered electronics develop smaller, lighter and more energy-efficient products while also reducing their design timescales and system costs.

The company was founded to bring to market a new generation of sophisticated power management ICs that help manufacturers more easily meet the world's increasing demand to save energy but at acceptable cost. CamSemi's products are based on its portfolio of patented and proprietary technologies including intelligent control architectures and PowerBrane™ ultra high voltage (UHV) process technology. These breakthrough approaches can benefit multiple markets, although initial products are targeted at the switch mode power supply and lighting sectors.
